

Use of the Model Designer of QGIS, for a multi criterial study in Avignon: getting the public parcels available

Schema of the study:

The Model Designer for the study:

Where:

- 1- The layers SCR are 2154, Lambert93
- 2- The GDAL raster calculator (r.mapcalc.simple) has the expression = (A>15)
- 3- The extraction expression is: "DN=0"
- 4- The road buffer is a 20-meter buffer
- 5- The final difference is to extract the public domain parcel which is not in: A 15 degree or more slope terrain, buildings, hydrographic surfaces, roads and the buffer around roads

A detailed map of the Vignonn area, showing the river, roads, and various points of interest. The map includes a legend with symbols for different types of features, such as buildings, roads, and water bodies. The river is shown in blue, and the roads are shown in grey. The area around the river is shaded in light green, indicating a natural or protected area. The map also shows the location of Vignonn, which is marked with a black dot. The map is oriented with North at the top.
